Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01-12-2007 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 15, 2-9,11,12 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee, et al.-2004/0098023 A1.

Lee discloses a vasoocclusive coil having a lumen with an expandable core therein. The expandable member can be a wire basket or balloon and it is attached to the outer occlusive member at locations along its length, for example by adhesive. The core when expanded provides the occlusive ember with rigidity to substantially hold its shape. The core is also provided with a bioactive material as claimed. See paragraphs 16,35-39,44,46,52.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 10 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee-'023 in view of Dieck-'6953465 and Shadduck-'2002/0183783 or Segal-'5695469 or Ham, et al.-5456667.

Art Unit: 3731

Lee discloses the invention as claimed with the exception of the core being in a coil, and the specific agent of claim 10. However, since the core can be a wire basket, many baskets (see Shadduck, Segal or Ham, for example) employ wire which have coil sections and would have been obvious shapes to form the expandable core of since they were known to be expandable frame structures. Dieck discloses the claimed agents. It would have been obvious to have provided these materials on the core of Lee as they are known vaso-occluding materials.
